RESULTS ON CREATING AND TESTING OF VARIETY RICE SV181 IN SOME CENTRAL VIETNAM PROVINCES

Nguyen Xuan Ky, Tran Thi Le, Hoang Kim, Hoang Van Hai

Summary
Rice variety SV181 (Sao Viet 181) was selected from the hybrid combinations IR71705/DT122, conducted since 2010 and put in the assay since 2013. The variety SV181 has short growing period (Summer-autumn season: 80-85 days, winter-spring season: 95-100 days), aromatic and high-quality rice, hard stem, against falling well, hardy and heat tolerant, high yield (80.0-100.0 quintals/ha), and is beyond the control varieties 15-20%. With many advantages, this variety meets the requirements of current varieties in terms of productivity, quality, time of growth for the agricultural production of Central-Highland areas in Vietnam.

Keywords: SV181, short-day aromatic rice, high yield, high quality.
