OM 10417 - A PROMISING RICE VARIETY
Nguyen Thi Lang, Thai Thi Hanh, Bui Chi Buu

Summary
OM 10417 a good rice variety, was selected from hybrid combinations C8/D18 and made in early 2006. OM 10417 has been short duration (sowing: 85-90 days, transplanting: 90-95 days), hard stem, strong tillering, high yield (6-9 tons/ha). Its grain has been tall, less chalkiness, glutinous (amylose content: 22%) and delicious rice. OM 10417 variety was resistant to BPH and blast at level 3 with the field conditions and level 5 with the artificial conditions. It has been suitable for the following provinces/city: An Giang, Tra Vinh, Can Tho, Vinh Long, Kien Giang, Can Tho...

Keywords: Short duration, high yield, resistant BPH, blast disease.
