

# **EVALUATE THE EFFECTS OF THE AGRICULTURAL LAND RECOVERY FOR CONSTRUCTING ADMINISTRATIVE CENTER ZONE OF CAO BANG PROVINCE TO PEOPLE'S LIVELIHOOD**

**Phan Thi Thanh Huyen, Nguyen Thi Hong Nhung**

## **Summary**

The issue of people's livelihood after recovering agricultural land for economic and social development is an interest problem. In the recent years, the policy of compensation, support and resettlement have been many changes to help people to lose agricultural land stabilize their livelihoods. However, they still face difficulties in finding jobs, stabilizing incomes and improving lives. The objective of this study is to assess the effects of the agricultural land recovery for constructing administrative center zone of Cao Bang province to the people's livelihoods. The study results showed that the livelihoods have been changed significantly as follows: natural capital decreased 89.80% in group 3, 47.51% in group 2 and 13.69% in group 1; average income rose 6.14% but not stable and; the proportion of agricultural workers significantly reduced; people have'nt been interested vocational training and children's education.

**Keywords:** *Effect, capital source, livelihood, land recovery.*
