EVALUATION OF RESULTS OF NEW RURAL CONSTRUCTION IN THE AREA OF AN THI DISTRICT, HUNG YEN PROVINCE

Pham Huy Hoang, Nguyen Quang Huy

Summary

In the period 2011-2016, the criteria for building new rural areas in An Thi district basically reached the set target, the total criteria of all categories reached 328 criteria, an increase of 193 criteria compared to the year 2011 (before entering new rural construction), reaching an average of 16.4 criteria / commune. Of which: 7 communes have 19 criteria, 1 commune has 16 criteria, 11 communes has 15 criteria and 1 commune has 14 criteria. In the process of building new rural areas, besides promoting the leading and guiding role of the Party and local authorities, an indispensable driving force is to mobilize internal resources the consensus, collective strength, the same people throughout the roadmap to build new villages in each commune. In the period 2016-2020, some measures should be taken to promote the progress of new rural construction such as early review, adjustment and supplementation of new rural construction planning; conversion of reasonable land use structure to increase land fund for rural infrastructure development; continue to implement land consolidation; development of centralized production models, associated with the construction of field patterns; in addition, the need to promote synergy to mobilize capital; it is necessary to have the participation of party committees, government and mass organizations, as well as the active participation of all people.
