

# LITERATURE REVIEW OF SUPPLY CHAIN RISK MANAGEMENT

Le Bao Toan, Bui Van Trinh

## Summary

Supply chain risk management has received increasing attention and has become an increasingly popular field of research in recent times. Sustainable business development has become a major focus area for supply chains due to increasing competitive advantages and globalization. The purpose of this study is to review the literature related to supply chain risk management and to identify the method or approach used in identifying and assessing the risks that occur in the supply chain of agricultural products. Using the content analysis method, the literature review, research results showed that the supply chain risk of agricultural products was identified because of a number of issues such as environmental protection, restriction of natural resource use, policy compliance, product traceability and transparency, human rights, social security and economic efficiency. It also revealed that this was a field that needs further empirical research to provide insights into current risk management trends in the supply chain.

**Keywords:** *Sustainable supply chain, supply chain for agricultural products, supply chain risk management.*
